Attention Canadian Taxidermists

Hello everyone,

In the past few years we should all recognize that prices have increased dramatically with shipping costs. In addition there have been supply issues and now the worry that tariffs may affect costs even more. At Select we will always do our best to maintain product and pricing for you, our Canadian customers.

We are posting new items on instagram @selecttaxidermyproductsLtd

Best regards in your business ventures.

Mark Zimmermann / Bill Rees

In sculpting the muledeer and whitetail forms my goal was to pay attention to and capture the correct anatomy of our Canadian deer. Structural detail in facial anatomy was important between the two species and much of my focus was given to the neck musculature all the way down to the deep brisket and leg detail. Shoulder anatomy was refined and combined with the other structural changes this new line of forms is sure to create a great fit.

A handwritten signature in black ink, reading "MPilon". The signature is stylized, with the "M" and "P" being particularly prominent.

How to Paint Flehmen Mouthpiece Assembly by Joe Meder

Steps

1. Wash all parts with thinner to clean any molding residue or dirt (Photo 1)
2. Spray the entire palette, lower jaw, and tongue with flesh tone. Feather out the flesh tone towards the front of the palette. (Photo 2)
3. Spray black at a low or flat angle to achieve the desired gray detail of the papillae and palette. (Photo 3)
4. Lightly spray a thin wash of gill red on the palette and lower jaw to brighten.
5. Same steps can be used for the tongue, except a deeper color of red is necessary. Check your references for palette and tongue colors.
6. The septum should be sprayed with flesh only.
7. Using Burnt umber oil paint, coat the teeth with paint and wipe off until the desired staining effect is achieved.
8. Coat all parts with clear gloss and assemble. (Photo 4)

Paints:
Airbrush: Flesh tone, Black, Gill Red
Oil: Burnt UMBER

McKenzie's Joe Meder Deer Eye

with Liquid Lens™ Technology

We are excited to introduce a design in deer eyes by Joe Meder with a revolutionary patented breakthrough effect called Liquid Lens™ Technology. To create this eye Joe went back to the basics and began by casting eyes and lenses from fresh deer. He then took those casts to his pen of live deer to compare. Once the prototype was complete, it was time to begin testing colors. Roger Martin from McKenzie and Teresa Fonder from Van Dyke's were brought in to help develop the special effect Joe was looking for. Glass eyes have always had a certain "flat" or lack of 3D effect when it comes to the depth that can be achieved with painting. Joe was very specific in that he wanted to create the effect of how a live eye captures and reflects light. With this request Roger has invented what may prove to be one of the biggest advances in glass eye technology in years. Through a series of mold designs and painting techniques he and Teresa have achieved for the first time in taxidermy, a truly "liquid" look in the lens.

The brown in the limbus band has been extended in the front to allow for easy setting in any deer form.

This lens shape by Joe Meder is cast from a real deer and allows the eye lid to lay accurately on the glass.

Rotated Meder Eyes

with Liquid Lens™ Technology

For years, we've used paint schemes on our pre-rotated eyes to mimic natural eye patterns and direction. Showing white in the front or back corner of the eyes can help an artist capture a moment in time, and tell a better story. Our Rotated Meder Eyes are the first in the industry with designated right and left eyes, to help create a more natural setting. The lenses are designed so that the corneal bulge is anatomically accurate for a rotated eye set. Whether looking at a butterfly, or rubbing a tree branch, every small detail counts! It can make all the difference in competition.

- ▶ Two Separate Lenses for Right and Left Eye.
- ▶ Only True Pre-Rotated Eyes on the market!
- ▶ Forward-Looking Liquid Lens Technology.
- ▶ Meder Eye Artwork Everyone Loves!
